

Care Instructions

Concrete

Properties

Glass fibre reinforced concrete or GFRC is a type of fibre-reinforced concrete. This mix offers you the strength of concrete yet offering a lighter weight product.

Concrete is one of the oldest, strongest and most durable materials that humans have ever made. It is versatile and can be molded to create soft, graceful curves and coloured in warm, soothing tones. Concrete also gives a natural look and feel and blends well with other design elements.

Concrete is inherently a porous material and we use a Polyurethane Sealer from industry leader, Buddy Rhodes. Buddy Rhodes Reactive Polyurethane Sealer is a hybrid sealer combining the benefits of both reactive sealing technology and a water borne urethane sealer. This sealer provides excellent stain and abrasion resistance, requiring very little maintenance for years of quality service.

Cleaning

DO CLEAN spills as soon as possible, using a mild soap and water.

For general day to day cleaning if needed spray your product with a mixture of mild soap and water; then spray off with a garden hose.

Regular Maintenance. We recommend you to use a beeswax or carnuba wax on a regular basis to extend the life of your table top. We recommend Buddy Rhodes Beeswax.

Buddy Rhodes Beeswax helps resist stains and enhances the color of concrete surfaces. The wax acts as a barrier to protect the sealer from abrasion and wear. This is a hard wax 'puck' that is rubbed across the surface, and buffed by hand or mechanically.

DO NOT use traditional heavy acid cleaners, which are formulated and may be suitable for commercial concrete installations or pool servicing. These acids are too caustic for use on outdoor concrete furniture.

DO NOT pressure wash with high-pressure powered pressure washers, for most applications a garden nozzle will be enough pressure to clean the furniture.

DO NOT drag a concrete table to a new position outdoors. This will cause irreparable damage to the table. The weight and size of the tables needs the help of 3 to 4 adult people.

Important

It's important to understand that concrete is concrete; it is porous and organic looking, and as it is used day to day, it will take on a perfectly imperfect look. It is this aging and character that offers such a unique and longstanding impact for those who enjoy the look of concrete. Concrete is a natural product and will behave like one, please remember this and follow care instructions to extend the life of your gorgeous concrete furniture.
