

Care Instructions

Sling

Properties

Available in a wide variety of designs and colours, Sling is a generic term for a woven, open-mesh fabric made from a vinyl coated, high strength polyester yarn. For our sling furniture we use only the highest quality Textilene® and Batyline® woven vinyl.

Excellent for outdoor use as the synthetic coating guarantees an extremely high weather and UV- resistance. Apart from its exceptional mechanical strength, it has a high chemical resistance. The fact that no moisture is absorbed, results in rapid drying, maximum stain and mould-resistance and simple cleaning.

Cleaning

Because the product is used outdoors over extended periods of time, regular cleaning with a soft brush and fresh water is important. This ensures the removal of superficial soil and debris, such as leaves, pollen and bird droppings, before they have a chance to build up and become more difficult to remove.

For tougher stains and more thorough cleaning, we recommend using 303 Multi-Surface Cleaner, following the instructions detailed on the label.

A pressure hose on a low setting is suitable to use on sling furniture.
